

# Build a Mobile App In An Evening (using Ionic)

Kevin Bluer

# Welcome!

# Tonight's Goal

“For you to come away with an appreciate of the aspects that go into a mobile application using the Ionic Framework”

# Agenda

# Agenda

- About Me (and You)
- A Brief History of Hybrid Mobile Development
- Cordova & PhoneGap
- Introducing Ionic Framework
- Review of Services
- Hello World
- Real World example with Emergency JS :)
- Summary / Q&A

# About Me (and You)

# About Me

- London + New York + HK
- BSc (UK) and MSc (US)
- Consultant & Instructor
  - Microsoft, The Economist Group, MTV Networks, JP Morgan, Google, General Assembly
- Specialize in web and mobile app development
- <https://github.com/kevinbluer>

# About You

- Name
- What You Do
- Experience Level
  - Software development in general
  - Ionic

# A Brief History of Hybrid Mobile App Development

# What is Hybrid?

- Process of building Mobile Applications using HTML, CSS, and JavaScript
- **Fully fledged** mobile applications
  - Access (the majority of) the devices sensors
  - Can be deployed to the stores
- “Build once, run anywhere”

# Technically Speaking...

- Web View Control (UIWebView on iOS, WebView on Android)
- HTML / CSS / JS Presented Full Screen
- Abstraction Layer That Exposes Device API's (e.g. Camera, GPS, Storage, etc)

# Pros + Cons

## ● Pros

- Very fast to get started (great starting off point)
- Cheaper / skills readily available
- Particularly good if you have an existing web interface to your product or service

## ● Cons

- Performance (although that's increasingly becoming less of an issue)
- Lag in terms of latest native API support

# Lots of Flavors

- ◎ **PhoneGap / Cordova**
- ◎ Appcelerator / Titanium
- ◎ Xamarin
- ◎ Sencha
- ◎ React Native
- ◎ Mobile Web Frameworks (Ratchet, Fries, etc)
- ◎ Etc

# Cordova & PhoneGap

# History (and odd relationship)

- Framework for building native apps using web-based languages
- Formally Nitobi (company behind PhoneGap) and acquired by Adobe in 2011
- Upon acquisition, open sourced under Apache Foundation (with the Cordova moniker)
- Now at version 4.0 (so pretty mature)

# More specifically...

- Generator + container (“www”)
- CLI (Command Line Interface)
- Build Service ([build.phonegap.com](http://build.phonegap.com))
- Plugin Ecosystem (since 3.0)

create <path>	create a phonegap project
serve	serve a phonegap project
build <platform>	build a specific platform
install <platform>	install a specific platform
run <platform>	build and install a specific platform
local [command]	development on local system
remote [command]	development in cloud with phonegap/build
platform [command]	update a platform version
plugin [command]	add, remove, and list plugins
help [command]	output usage information
version	output version number

# Plugin Ecosystem

- “A plugin is a bit of add-on code that provides an interface to native components” (and more)
- Since 3.0
- Available at <http://plugins.cordova.io>
- Installed / Managed via the CLI
  - “cordova plugin add org.apache.cordova.device”

# Code Sample (it's JavaScript)

```
navigator.camera.getPicture (  
    onCameraSuccess,  
    onCameraError,  
    {  
        quality: 50,  
        destinationType: Camera.DestinationType.DATA_URL  
    }  
);
```

```
function onCameraSuccess (imageData) {  
    var image = document.getElementById( 'myImage' );  
    image.src = "data:image/jpeg;base64," + imageData;  
}
```

# Introducing Ionic

# Introducing Ionic

- “Free and open source, Ionic offers a library of mobile-optimized HTML, CSS and JS components, gestures, and tools for building highly interactive apps”
- It’s also...
  - “Performance obsessed”
  - “Native focused”
  - “Beautifully designed”
  - “A powerful CLI”

# Technically Speaking...

- Builds on top of Cordova (extends its CLI)
- Reasonably “opinionated” structure to building and organizing your apps
- Collection of CSS components
- Large AngularJS-based collection of directives, delegates, etc (e.g. ion-nav-view, ionList, \$ionicPopup, etc)

# LOTS of Innovations

- Creator (<https://creator.ionic.io/>)
- View (<http://view.ionic.io>)
- Analytics (<https://apps.ionic.io>)
- Push (<https://apps.ionic.io>)
- Icons (<http://ionicons.com>)
- Market (<http://market.ionic.io/>)
- Deploy (update with needing to resubmit to the app stores)

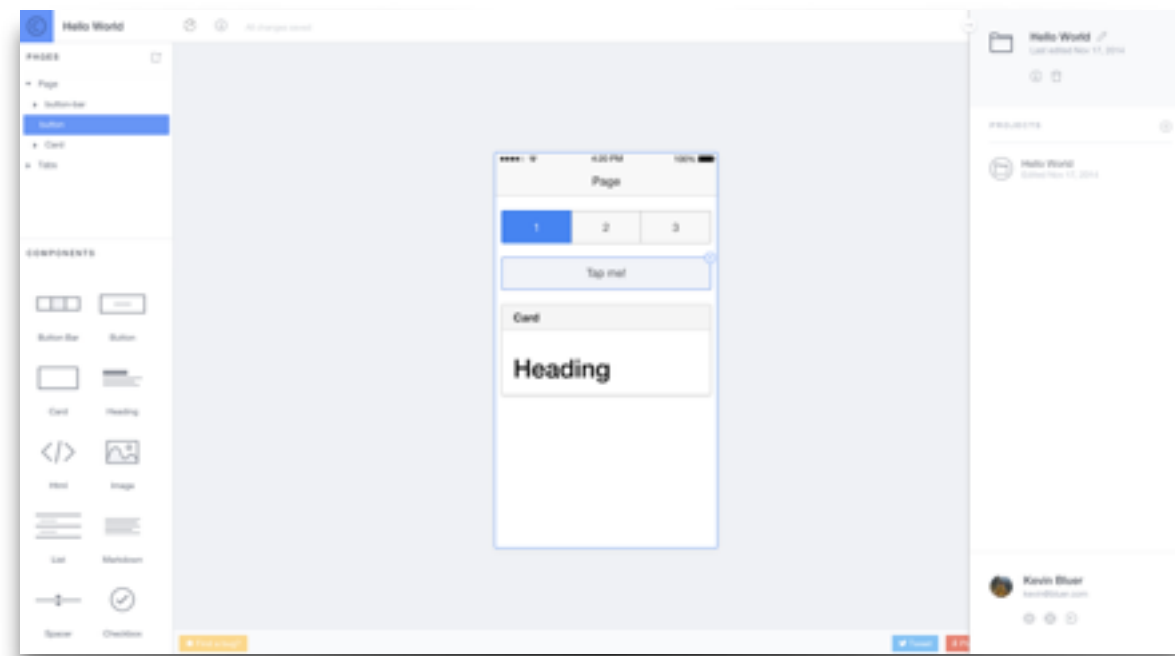

# Quick Look: Ionic Creator

# Ionic Creator for Prototyping

- Available at (<http://creator.ionic.io/>)
- Visual prototyping of applications
- Similar role to [Balsamiq Mockups](#), [UXPin](#), [Proto.io](#) although generates actual code!

# Export!

## Export

[Ionic CLI](#)

[ZIP File](#)

[Raw HTML](#)

Start a new Ionic app using the [ionic](#) tool:

```
$ npm install -g cordova ionic  
$ ionic start [appName] creator:e97932c2bcc0
```

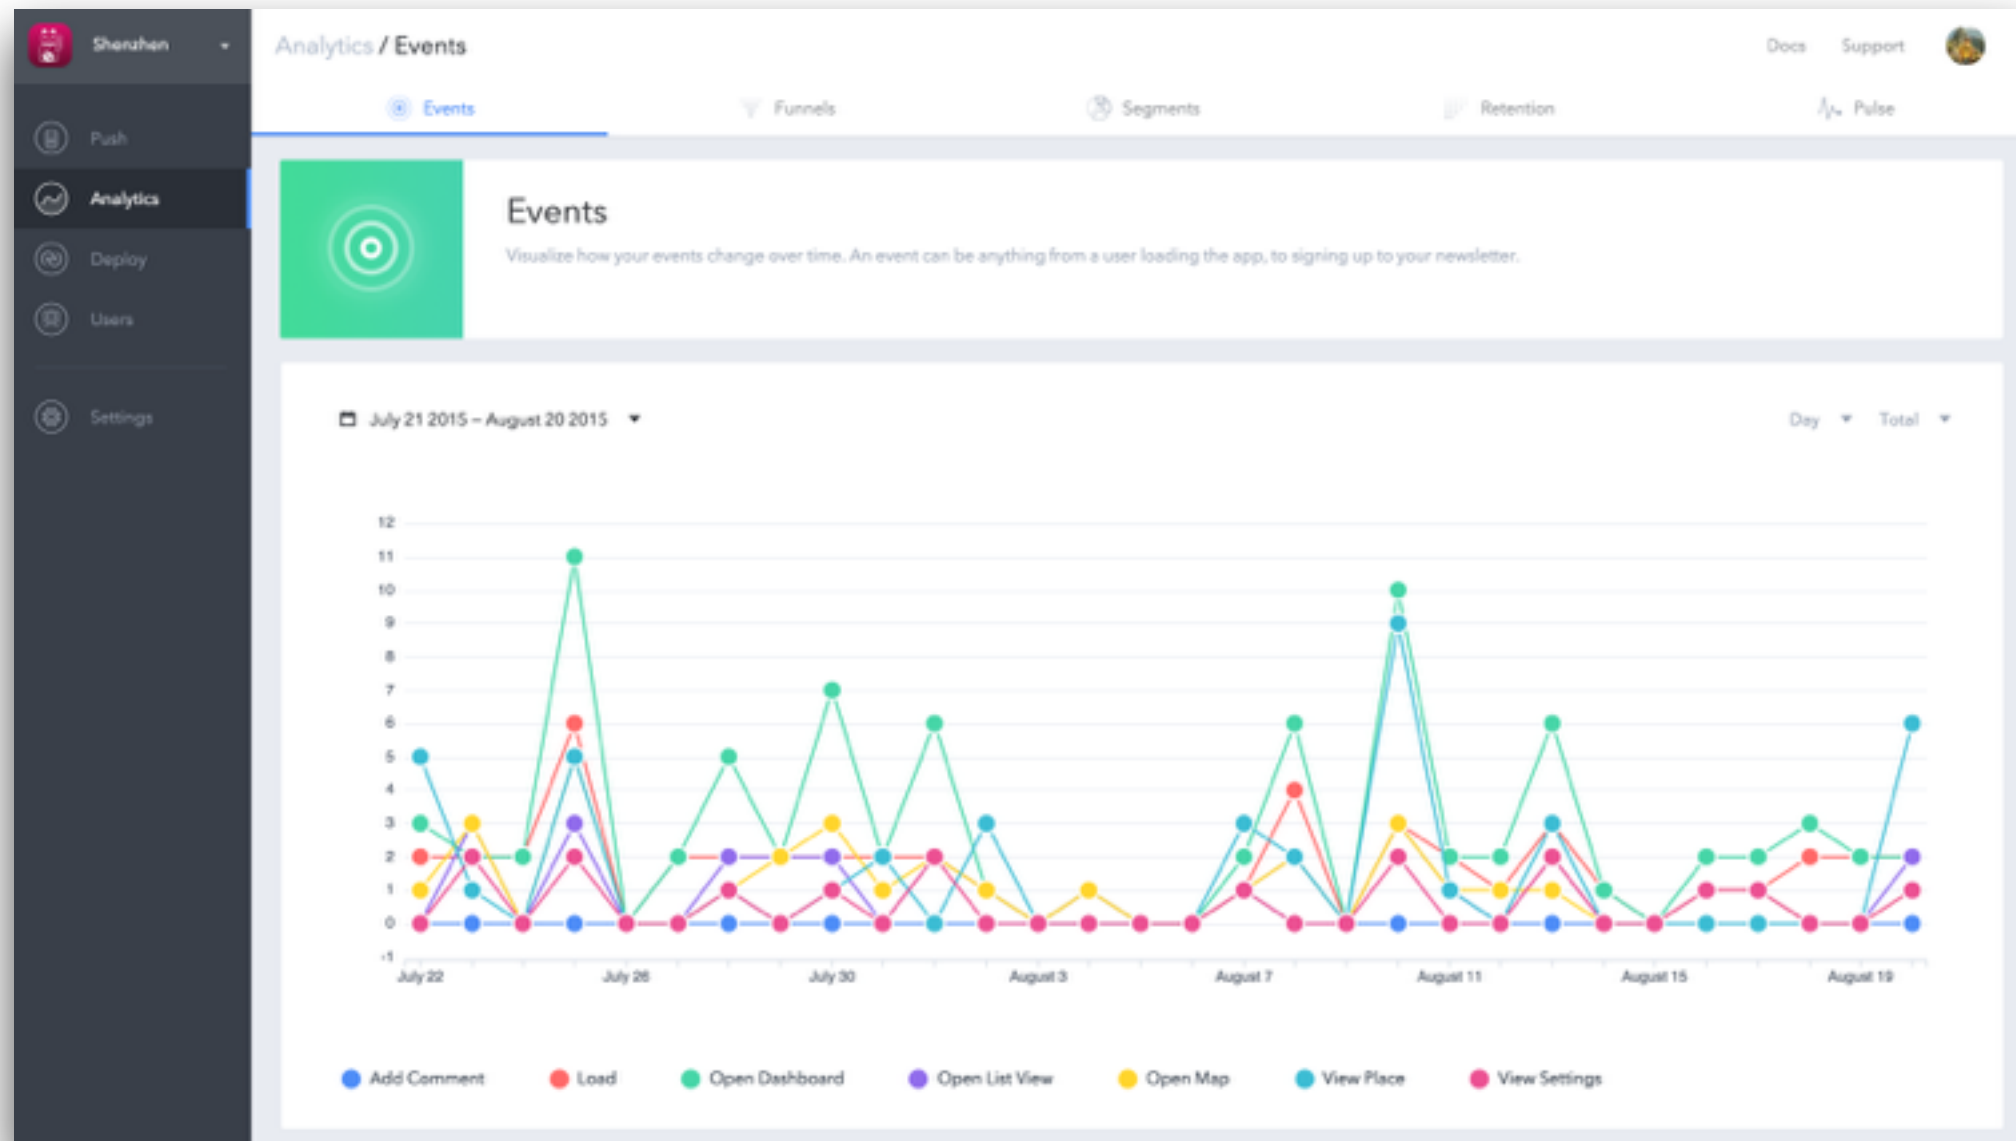

See the [getting started](#) page for more information

# Quick Look: Ionic Analytics

# Ionic Analytics

# Quick Look: Market (and Codepen)

# Codepen Gallery

- ◎ Great way to learn too!
- ◎ CodePen
  - ◎ Large and well maintained gallery of controls and samples ([codepen.io/ionic](http://codepen.io/ionic))
    - ◎ E.g. <http://codepen.io/ionic/pen/rxysG>
    - ◎ E.g. <http://codepen.io/ionic/pen/AjgEB>
- ◎ Market
  - ◎ Brand new and largely free stuff :)

# Ionic in the Wild

# Ionic Showcase

- © “A showcase of the most beautiful apps built with Ionic” (<http://showcase.ionicframework.com>)
- © Keychain Logistics...great example of fit

# Demo 1.0

## “Hello World”

# Follow Along...

- Pre-requisites:
  - Install Node / NPM
  - Platform tools: <https://www.npmjs.com/package/ionic>
  - Ionic Account (optional)
  - Note the platform dependencies for building iOS and Android versions

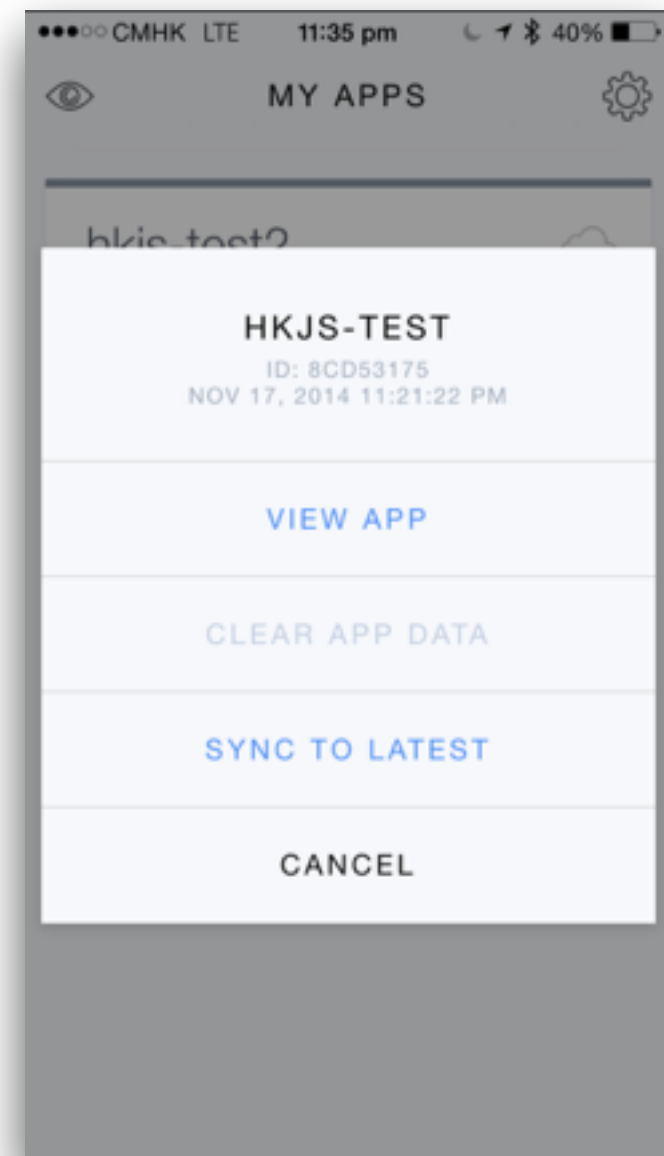

# Ionic “Hello World”

- Installation: *sudo npm install -g cordova ionic*
- Get an app up and running in 4 commands...
  - ***ionic start myApp tabs*** (and *cd*)
  - ***ionic platform add ios*** (or *Android*)
  - ***ionic build ios***
  - ***ionic emulate ios*** (requires *ios-sim*)
- Add / Edit some “stuff”
- Push to mobile local device
  - ***ionic emulate ios --device*** (or *via IDE*)

# Ionic Upload / View

- Ability to push builds “to the cloud” and open on the Ionic View app (available in the store)
- *ionic upload*

# Demo 2.0

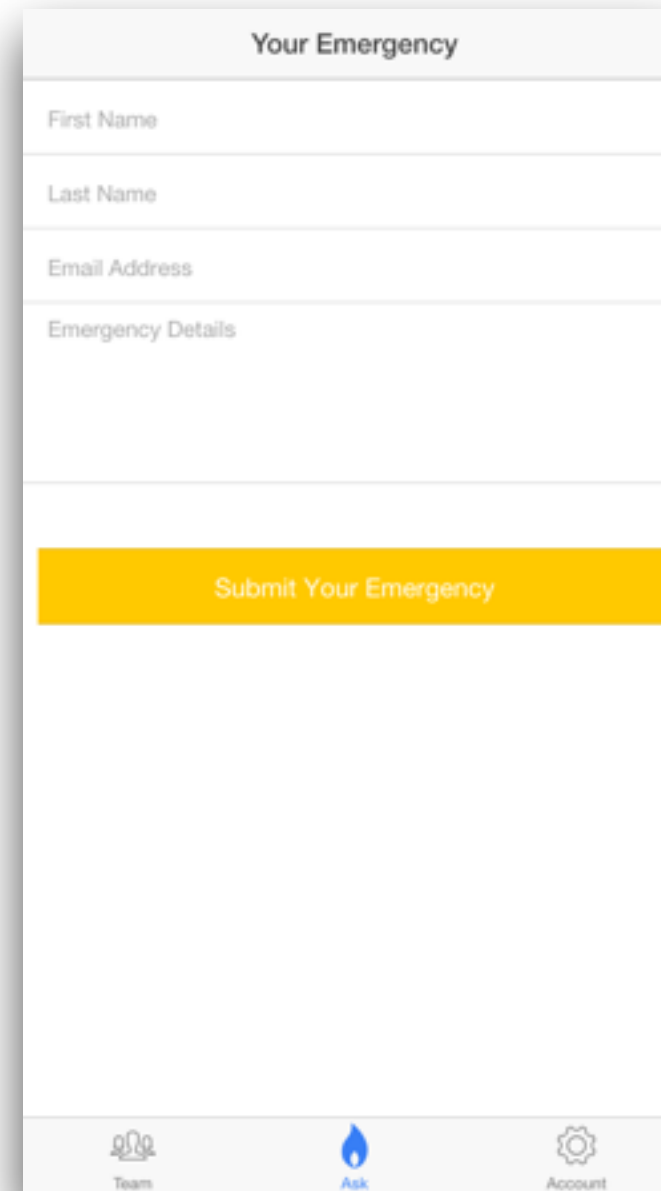

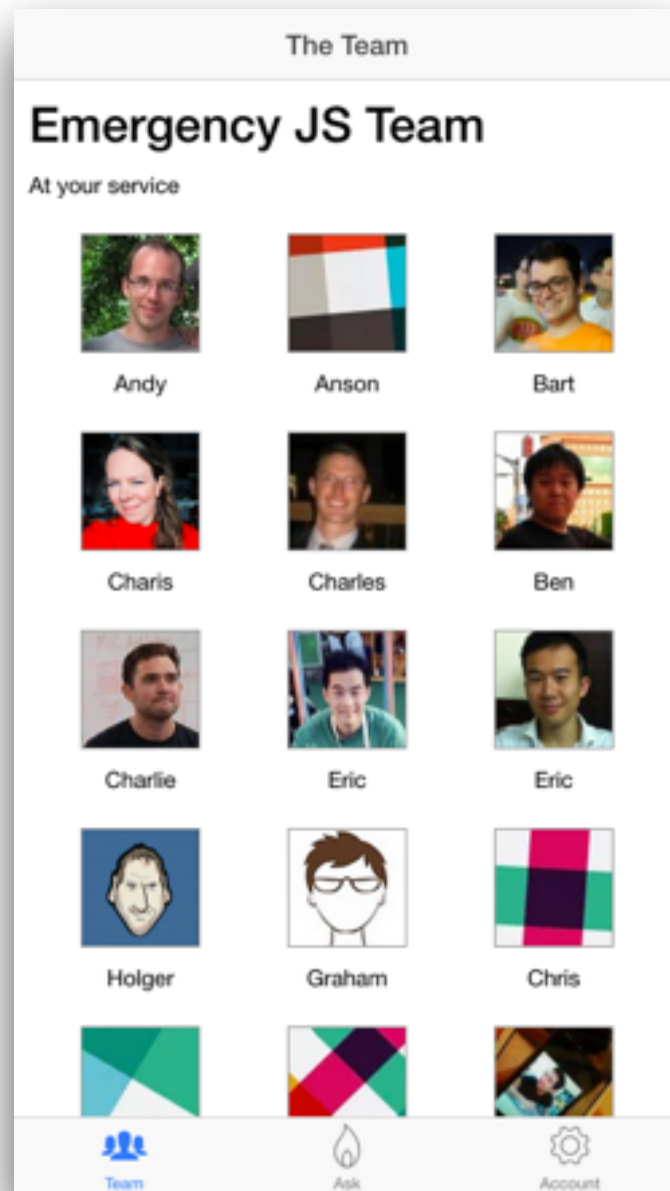

## “Real World”

# Introducing Emergency JS

- A means of connecting with the Hong Kong JS community during “JavaScript emergency”
- Feel free to review the code in real-time:
  - <https://github.com/hongkongjs/emergencyjs-ionic>
- Notes
  - Uses the Slack API :)

# Introducing Emergency JS

# Code Review

- Review Core Areas
- Update the Settings Screen
- Include Modal Popup upon save
- Add an additional tab

# Generating Assets

- Historically a pain in the butt!
- Now it's SIMPLE :)

# Code Review

- Review Core Areas
- Update the Settings Screen
- Include Modal Popup upon save
- Add an additional tab

# Backends

# Backends

- Given it's all JS / Angular it can easily be plugged into existing RESTful API's and services
- E.g. [parse.com](http://parse.com), [firebase.com](http://firebase.com), [contentful.com](http://contentful.com), [forecast.io](http://forecast.io)

# Next Steps

# Future Enhancements

- Improved Style
- Statistics / Infographic on Welcome Tab
- Tracking of your request
- Push notification when you receive a response
- Ask individual team members
- Analytics
- Wire up to a Backend Data

# Ionic Next Steps

# Ionic Next Steps

- Install: *sudo npm install -g cordova ionic*
- Review the getting started guide ([ionicframework.com/getting-started/](http://ionicframework.com/getting-started/))
- Check out the Showcase ([showcase.ionicframework.com](http://showcase.ionicframework.com))
- Register for Ionic Creator ([creator.ionic.io](http://creator.ionic.io))
- Use Ionicons ([ionicons.com](http://ionicons.com))
- Checkout their Codepen (<http://codepen.io/ionic>)

# Q&A

kevin@bluer.com
